S

TIPS

FOR QUESTIONS THAT INVOLVE UNITS LIKE g, kg, cm, mm, m, km, minutes, hours etc;

ALWAYS **CHANGE THE UNITS FIRST** AS REQUIRED BY THE QUESTION.

The cupid in the diagram weighs 24kg.

Its bow and arrow is $\frac{1}{4}$ times the cupid.

Find the total mass of both the cupid and the bow and arrow, in g.

1st step : Change 24 kg into 24000 g

Therefore; **Cupid = 24000 g**

2nd step : Find the mass of bow & arrow

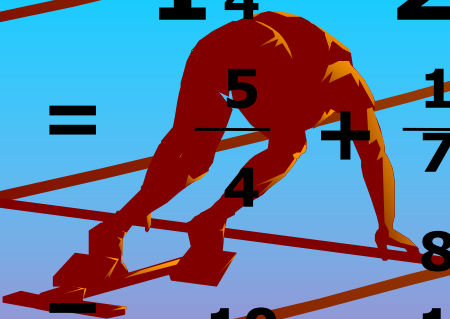

Bow & arrow = $\frac{1}{4} \times 24000$ g

6000 g

**Total = 24000 g + 6000 g
= 30000 g**

TIPS

Always change mixed numbers into improper fractions before you proceed to calculate them to avoid making mistakes.

$$\begin{aligned} & 1\frac{1}{4} + 2\frac{1}{8} + 1\frac{1}{2} \\ = & \frac{5}{4} + \frac{17}{8} + \frac{3}{2} \\ = & \frac{10}{8} + \frac{17}{8} + \frac{12}{8} \\ = & \frac{39}{8} \text{ or } 4\frac{7}{8} \end{aligned}$$

Even though the fractions can be added easily, but you might make mistakes if you don't change them into improper fractions!
